PADDLE WHEEL CLEANING SHIP

**MAKE
ENVIRONMENT
FRIENDLY**

The paddle wheel cleaning ship is an environmental protection engineering ship used to clean up the floating garbage on the water surface. Its main feature as follows:

- This ship can not only harvest some aquatic plants such as water hyacinth and Dongyang grass, but also salvage some domestic garbage such as foam boxes and plastic bags. Its operation is convenient and simple, and the harvesting, salvaging, storage and unloading can be easily controlled by the buttons on the console in the cab.;
- This horizontal scissors, collecting arm, and automatic collecting wheel cooperate with the front collecting cabin tacitly, and can work continuously and work stably;
- This ship is equipped with an anti-collision protection device on the horizontal scissors, which can effectively prevent the scissors from colliding with underwater rocks and sundries when harvesting water weeds, improve the service life of the scissors, and ensure the continuity of the harvesting operation;
- This ship is suitable for mowing and cleaning in rivers with complex water environment and geographical location. The double wheels can effectively prevent the disadvantages of traditional propellers from being entangled by fishing nets and debris, and can turn around in place.

MAIN PARAMETERS

Deck length	8m
Depth Moulded	1m
Ship width	3m
Draft (full load)	0.4-0.5m
Engine power	75kw
Light speed	4km/h
Collection depth	0.8m
Endurance	24h
Passenger	2
Max. ship length	13.5m
Max. ship height	2.5m
Max. ship width	4.4m
Max. discharge height	> 2 m
Displacement (no load)	12m ³
Max. loading capacity	8-10m ³
Working speed	2km/h
Collection width	3.4m
Navigating Zone	Class B
Drive type	Paddle wheel
Efficiency	6800m ³ /h
